# ADAPTIVE BEHAVIOR EVALUATION SCALE THIRD EDITION: 4-12 YEARS (ABES-3: 4-12 Years)

Stephen B. McCarney, Ed.D. & Samm N. House

© 2017

The Adaptive Behavior Evaluation Scale- Third Edition (ABES-3) is a norms update of the Adaptive Behavior Evaluation Scale-Revised Second Edition (ABES-R2) (McCarney & Arthaud, 2006). It provides a measure of adaptive skills necessary for success in educational and residential settings. The ABES-3 may be used as a general or specific measure of adaptive skills with any student experiencing academic or behavioral difficulties regardless of the severity or suspected disability. The ABES-3 assesses 10 areas of adaptive skills grouped under the three adaptive behavior domains defined in the 10<sup>th</sup> AAMR Definition of Mental Retardation (AAMR, 2002). The Conceptual domain includes the Communication and Functional Academics subscales and assesses cognitive, communication, and academic skills. The Social domain assesses skills related to social competence and includes the Social, Leisure, and Self-Direction subscales. The Self-Care, Home Living, Community Use, Health & Safety, and Work subscales in the Practical domain assess independent living skills.

The **ABES-3: 4-12 School Version** was standardized on a total of 2,012 students. The **ABES-3: 4-12 Home Version** was standardized on a total of 1,518 children and youth. Demographic characteristics of the standardization population approximated the national percentages for gender, residence, race, geographic area, and occupation of parents.

Internal consistency of the **ABES-3: 4-12 School** and **Home Versions** fell at or above .88 for each subscale. Test-retest reliability for both versions yielded correlation coefficients ranging from .88 to .98, indicating substantial reliability for each of the 10 subscales. Coefficients for inter-rater reliability for the subscales ranged from .60 to .84 for all age levels. Content validity was established through the initial development process. The **ABES-3: 4-12** was compared to the *Adaptive Behavior Assessment System, Third Edition* (ABAS-3) (Harrison & Oakland, 2016) as a measure of concurrent validity. The construct validity of the scale supports strong diagnostic validity. Item performance correlated positively with total score performance, further substantiating the internal cohesiveness of the scale as a measure of adaptive skills.

The ABES-3: 4-12 uses frequency-referenced quantifiers. Each item on the ABES-3: 4-12 is rated on a six point scale from (0) NOT DEVELOPMENTALLY APPROPRIATE FOR AGE to (5) DISPLAYS THE BEHAVIOR/SKILL CONSISTENTLY. Following completion of the ratings, seven types of scores may be obtained: frequency rating for each item (reflecting the degree of success in performing a behavior), subscale raw score (the sum of the frequency ratings for each subscale), subscale standard score (a consistent basis for comparing students), a domain quotient and percentile, and an adaptive skills quotient and percentile. The subscale standard scores are plotted on the graph at the bottom of the Profile Sheet to provide a visual representation of skills.

The **ABES-3: 4-12** takes approximately 20 minutes to complete and can be completed by anyone familiar with the student: the classroom teacher, clinical personnel, other school personnel, or the parent/guardian. The **ABES-3: 4-12** complete kit consists of school and home version rating forms and technical manuals, and the *Adaptive Behavior Intervention Manual: 4-12 Years*. The intervention manual includes goals, objectives, and intervention strategies for the behaviors on the scale and was designed for the convenient development of a student's IEP.

The ABES-3: 4-12 assists school personnel in making diagnostic, placement, and programming decisions for intellectually disabled and emotionally disturbed/behaviorally disordered children and youth. The strong correlation of school and home ratings of adaptive skills makes the ABES-3: 4-12 an efficient and effective means of measuring adaptive skills for decision-making. Use the companion *Adaptive Behavior Intervention Manual: 4-12 Years* for program development and implementation for disabled students. The ABES-3: 4-12 Quick Score is a Windows®-compatible program which converts raw scores to standard and percentile scores.

## **SCHOOL VERSION RATING FORM: 4-12 YEARS**

#### Stephen B. McCarney

#### RATING GUIDELINES

- The student should be rated by school personnel who interact directly with the student in the school environment.
- The rater should rely on his/her observation of the student's behavior as it occurs naturally in the school environment.
- If the rater has no knowledge of the student's ability to perform a particular item on the scale, it is recommended that the rater consult another person in the school environment to provide information for that item. No boxes are to be left blank.
- It is recommended that each quantifier is read with the item, before rating the item. Using item 8 as an example, the rater would first read, "Is not developmentally appropriate for age to tie or fasten shoes," then "Does not display tying or fastening shoes," "Is developing tying or fastening shoes," "Displays tying or fastening shoes inconsistently," "Displays tying or fastening shoes most of the time," and finally "Displays tying or fastening shoes consistently."
- It is not necessary to complete the rating for a student in one day. Several days may elapse before the rater is able to complete the scale.
- If the behavior/skill is one that the student would not be expected to display at his/her age, the rating should be

0

NOT DEVELOPMENTALLY APPROPRIATE FOR AGE.

 If the behavior/skill has not been observed because the student has not yet developed the behavior/skill or chooses not to display the behavior/skill, the rating should be

DOES NOT DISPLAY THE BEHAVIOR/SKILL.

If the student is beginning to develop/display the behavior/skill, but it is not yet developed to the point where the student is successful; the rating should be

2

IS DEVELOPING THE BEHAVIOR/SKILL.

 If the student has developed the behavior/skill but does not display the behavior/skill on a regular basis, the rating should be

DISPLAYS THE BEHAVIOR/SKILL INCONSISTENTLY.

 If the student successfully displays the behavior/skill the majority of the time except in a few instances, the rating should be

DISPLAYS THE BEHAVIOR/SKILL MOST OF THE TIME.

If the student is consistently successful in all situations relative to the behavior/skill, the rating should be

5

DISPLAYS THE BEHAVIOR/SKILL CONSISTENTLY.

# III. Goals, Objectives, and Interventions

# 1 Comprehends typical verbal communications

Goal:						
1. The student will comprehend typical verbal of	communications.					
Objectives:						
1. The student will follow verbal directions in c	orrect sequential order on out of trials.					
2. The student will comprehend out of						
	omprehend verbal communication by listening care-					
fully and summarizing the information with	% accuracy.					
4. The student will follow verbal directions with	n teacher assistance on out of trials.  directions on out of trials.					
5. The student will independently follow verbal	directions on out of trials.					
6. The student will follow one-step verbal direc						
	emprehend a conversation by listening carefully and					
responding appropriately on out of						
	omprehend a question stated verbally listening					
carefully and making an appropriate response						
9. The student will repeat what is said with						
Interventions:						
1						
1. Provide the student with a written copy	ry,					
of verbal communications (e.g., directions,	pm-					
questions, announcements, etc.).	Le cerve					
	Inter					
Interventions:  1. Provide the student with a written copy of verbal communications (e.g., directions, questions, announcements, etc.).  2. When the student is a substitute of the studen						
information, remind him	to make certain the					
in which the more	directions accurately.					
(e.g., "R	A P
